Retrieving an Article from a Database

1. Go the Carnegie Vincent Library homepage: [HERE](#).

2. Select the "Databases" tab, then choose your database from the "A-Z Database List" or the "Databases by Subject" list.

It is important to access databases from the library homepage because this will ensure that you see the Carnegie Vincent Library and Reed Health Science Library buttons in databases.

Contact the Lincoln Memorial University Carnegie Vincent Library for further assistance. Phone: 423.869.7079 E-mail: library@LMU.net.edu
3. If you are searching for a specific article you may wish to use "Advanced Search" functions to search by title, author, etc. This is the advanced search in PubMed; however, many other databases also have advanced search options.

4. Choose the desired article from the search results.

Cardiac Progenitor Cells in Myocardial Infarction Wound Healing: A Critical Review.
Morris JW Jr, Liechty KW
Author information

5. Select the Reed Health Sciences Library button or the Carnegie Vincent Library button. If you are in PubMed you may see the “Free in PMC button” for some articles. This button will also lead you to articles.
6. In most cases you will be directed to the library catalog or to an LMU login screen. You may request articles through interlibrary loan via the catalog. If you log in to your LMU account you should be taken directly to the article, or to a journal page. For instructions on accessing an article from a journal page, see the "Retrieve Articles from a Journal" instructions/handout.
